

# Staff Security Training 2019

IT Security Education and Training are essential to IT Business Continuity Planning. If you're already a BES Services client, it's likely you have your important business data backed up off-site to a secure location. You should feel confident that your business could be virtually up and running within a few hours should you become a victim of natural disaster, hardware failure or cyber attacks.

Other elements of a successful IT Business Continuity Plan should include Data Loss Prevention, Notifiable Data Breach Protocols as well as Staff Education and Training.

BES has been supporting local businesses with their IT products and services for over thirty years. It's clear that many data breaches stem from users failing to use appropriate discretion, especially with email.

After seeing networks compromised dozens of times by naive staff members, we designed a Staff Security Training program to assist our clients to protect their networks, their data and profitability.

After rolling out this program to many of our valued clients, it is now considered as essential as First Aid and OH&S training.

## Package includes:

- Multiple simulated spam/phishing emails sent to staff throughout the month prior to onsite training to evaluate security behaviours.
- BES collates a report on staff security vulnerabilities existing within your business and shares it with appropriate stakeholders.
- **Onsite training session for up to one hour with your staff**
- Online video based training
- Printed collateral for your office to serve as a visual prompt for your team members to remain vigilant.
- 12 months of follow up simulated emails to continually evaluate your team's vigilance.

Security is everyone's responsibility! If you would like to know more about our Staff Security Training, email [sales@bes.com.au](mailto:sales@bes.com.au) or call (07) 3340 5555.
